

TD³

THERMODRYING FILTERING UNIT

It works great with both waterborne and solvent based paint

DOUBLE HEATING ACTION

TRY THE DIFFERENCE!

The innovative and patented Walcom TD³ system is the first product in the market that simultaneously allows to:

- heat and thermo regulate compressed air (set and keep air temperature at spray gun inlet);
- filter compressed air from water, oil, vapour, humidity and gas impurities;
- automatically regenerate silica gel;
- 30-40% reduction in drying time for solvent based paints and 25-30% for waterborne based paints;
- better paint layout and faster paint application;
- lowering of the dew point;
- automatic silica regeneration by SRS (patented).
